Ribbon Session Border Controllers
for Zoom Phone
Enabling and Securing Bring Your Own Carrier (BYOC) Deployments

Zoom is one of the world’s most popular meeting platforms. Organizations already rely on Zoom’s collaboration tools, now they are adopting Zoom Phone for their business communications needs. Zoom Phone makes it seamless for companies of all sizes to move to the cloud, eliminating or simplifying migration off legacy PBX hardware. Zoom’s Bring Your Own Carrier (BYOC) services, paired with a Ribbon Session Border Controller (SBC), makes it easy and cost effective to replace outdated office phone systems. Ribbon offers a wide portfolio of Zoom certified SBCs to securely connect Zoom Phone to an organization’s preferred carrier.

Bring Your Own Carrier (BYOC) Ready
Zoom’s BYOC solution makes it easy for organizations to securely connect new or existing phone lines, numbers and calling plans to Zoom Phone.

Ribbon Session Border Controllers provide:

• Security against eaves dropping and denial of service attacks with encryption (TLS/SRTP) and secure access control
• Interoperability to allow a broader set of carrier choices
• Integration to allow migration from a legacy PBX or Contact Center
• Powerful troubleshooting tools to maximize network performance and availability

More Certified SBC Choices
Ribbon has the largest portfolio of Zoom certified SBCs, giving customers the best fit for their deployment requirements at one or thousands of location.
